## PROJECTS

---

### System Engineering

As our final year project where I was a group leader we were required to develop a professional business-oriented information system, Point-Of-Sale(POS) intergrated with Inventory Management System. We are at liberty to inspect evolving product and make suggestions regarding the enhancement of the system. We were able to complete Front-End System and Web Application.

**Clients:** Food restaurants

### Quiz Application

As part of our final year project, we developed—a graphics-based quiz application using **advanced C++ programming techniques**. The application included randomized True/False and Multiple-Choice Questions, with one question appearing at a time. User interaction was required for each question, and progress was tracked throughout the quiz. The final score was provided, along with feedback on each response and the correct answers. The quiz had multiple levels of increasing difficulty, with additional features like a timer and leader board. An extra game, such as "fill in the missing character to form a word", was included. The chosen topic or theme were to be customized, and graphics were incorporated using a **C++ Game Engine or Graphics Library**.

### Heckathon

I participated in my first Heckathon with Tech Society UKZN and BBD. The Heckathon was held for two weeks(Started on the 31st October 2022 and ended on the 12 of November 2022), where we were taught **JavaScript, HyperText Mark-up Language (HTML), Cascading Style Sheet (CSS)**. My team came out position 3.
